

Dear Resident,

The Village of Wilmette will be performing asphalt rejuvenating maintenance on your city streets. Please be advised that the contractor CAM, LLC is scheduled to do work on your street starting August 7th. Consequently, there will be

No On-Street Parking from Friday, August 7th thru Saturday, August 8th.

If you have a lawn sprinkling system that sprays or drains onto the street pavement you should turn it off for the day in which work will be performed on your street and one day following the treatment.

Treatment FAQ:

Why is this product being applied to my road? CAM, LLC will be applying Reclamite Maltene Based Rejuvenating Agent to your roads. Reclamite is a product designed to extend the life of the pavement by sealing the pavement from the elements. The city's preventative maintenance effort will minimize the need for more costly and disruptive methods of street repair.

How long does the process take? Once the contractor begins on your street, the process will only take a few hours. Once the road has been treated with lime screenings, the road will be fully opened to traffic.

When can I drive on the road? You can exit your driveway and drive through the work area, but please go slow and stay on the area treated with screenings. Be advised that driving onto a driveway before the contractor is finished applying the limestone may cause the driveway and sidewalk to become temporarily stained.

When will the road be cleaned up? After the product is applied, an application of limestone screenings will be applied to the road. This is not permanent. The screenings will be swept up in a day or two after the product is applied.

This product is environmentally safe and will extend the pavement's life. We will do our best to minimize any inconveniences during the application process. If there are any questions, please contact the Village at 847-853-7629 or CAM at the phone number below.

Thanks for your patience,
CAM, LLC
